DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 1, 4 and 6 are withdrawn in view of the newly discovered reference(s) to Degani, U.S. Patent 6,342,399 B1. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Degani U.S. Patent 6,342,399 B1.

5. Degani discloses a semiconductor device as claimed. Please see **FIGS. 1-12**, where Degani teaches the claimed invention.

6. Pertaining to claim 1, Degani teaches an electronic structure, comprising:
- a semiconductor substrate 51 having a first electrically conductive pad 17/31 thereon, wherein a surface area of the first pad exceeds a surface area of the second pad (i.e., the pad the couples solder bump 52); and
- a solder member 52 electrically coupling the first pad to the second pad.
7. Pertaining to claim 4, Degani teaches the electronic structure of claim 1, wherein the organic substrate includes an organic material selected from the group consisting of an epoxy, polyimide, a polytetrafluoroethylene, and combinations thereof ((column 4, lines 53-55).
8. Pertaining to claim 6, Degani teaches the electronic structure of claim 1, wherein the solder member includes a lead-tin alloy (see Table 1).

Art Unit: 2823

Objections

9. Claims 2, 3 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Allowable Subject Matter

10. Claims 7-18 and 20 allowed.
